

The Stanz pedestal comes standard with a 8" x 8" (200mm x 200mm) base plate with 4 - 5/8" (15mm) mounting holes in a 6" x 6" (152mm x 152mm) pattern. Upon request, this base plate can be modified to accommodate existing mounting systems and styles so the Stanz pedestal can be used as a replacement to damaged units. The height can be modified to suit individual requests. The heads are available in single or double duplex outlets as per the request of the customer.

On Impact

After

"The Stanz pedestal comes in gloss black as the standard color but is available in any standard color available through the powder coating facility."

Specifications

The **Stanz pedestal** is a heavy duty pedestal constructed of solid material with a top quality finish that will look excellent for a lot longer than the ones available until now.

They are constructed with a heavy duty steel base plate; heavy duty tight wind spring and heavy duty thick wall 2" (50mm) stand pipe topped with a cast aluminum head for the installation of the electrical outlets.

The base plate has a 2" (50mm) hole in the centre to allow for the electrical wiring to enter. The 3 steel components are welded together with the aluminum head threaded on top.

The unit is sand blasted and powder coated with a 4.5 - 7mm high gloss finish. In the standing position, with the proper electrical components installed, the unit is weatherproof and will withstand freeze/thaw cycles.

The unit will withstand the typical low to medium force impact and return to the upright position with little to no damage to itself or the source of the impact.

The Stanz pedestal has been created to be the new standard for parking lot pedestals. Yes, there will still be uses for the typical ones that are in existence now but the demand for clean, straight & uniform pedestals has existed for a long time but has not been addressed until now.
